

ME2-O2-Φ20

Electrochemical Oxygen Sensor

Manual

(Model: ME2-O2-Φ20)

Zhengzhou Winsen Electronics Technology Co., Ltd

ME2-O₂-Φ 20 Oxygen Sensor

ME2-O₂-Φ20 electrochemical sensor detect gas concentration by measuring current based on the electrochemical principle, which utilizes the electrochemical oxidation process of target gas on the working electrode inside the electrolytic cell, the current produced in electrochemical reaction of the target gas are in direct proportion with its concentration while following Faraday law, then concentration of the gas could be get by measuring value of current.

1. Features

- * Low consumption
- * High precision
- * High sensitivity
- * Wide linear range
- * Good anti-interference ability
- * Excellent repeatability and stability

2. Application

Detecting O₂ in mine, industry and environmental protection field.

3. Technical Parameter

Item	Parameter
Detection gas	O ₂
Measurement Range	0~25%Vol
Max detecting concentration	30%Vol
Sensitivity	(0.1~0.3) mA (In air)
Response time (T ₉₀)	≤15S
Load resistance (recommended)	10kΩ
Repeatability	<2 % output value
Stability (/ month)	<2 %
Zero drift (-20℃ ~40℃)	≤0.1%vol
Storage temperature	-20℃ ~50℃
Storage Humidity	0 % ~99 % RH
Pressure range	normal atmosphere ±10%
Anticipated using life	2 years

4. External dimension

5.Characterization

Features of Sensitivity, response and output signal

Data graph of concentration linearity features

6.Basic circuit

7. Application Notes:

- Sensor shall Avoid organic solvent, coatings, medicine, oil and high concentration gases;
- All ME Sensors shall not be encapsulated completely by resin materials, and shall not immerse in pure oxygen environment, otherwise, it will damage the function of sensor;
- All ME sensors shall not be applied in corrosive gas environment, or the sensor will be damaged;
- Please test the sensitivity of gas sensors in clean atmosphere;
- Sensors Shall be avoided to face the gas, which flow directly from front side;
- To avoid to bend and break of pins;
- Blowhole of the sensor should not be blocked and polluted, which will cause the sensitivity decrease;
- Excessive impact or vibration should be avoided;
- Do not use the sensor when the shell is damaged;
- It takes some time for the sensor to return to normal state After applied in high concentration gas;
- Do not take apart the sensor, otherwise electrolyte leakage can cause sensor damage;
- Working electrode and reference electrode of the sensor shall be in short circuit when stored.;
- To preheat over 48hs before using and soldering forbidden;

Note: To keep continual product development, we reserve right to change design features without prior notice !
